TC2000-G1/G2/G3

Thermal Cycler Gradient

NEW

Features

- 10-inch large screen new UI interface, divided into single-channel / dual-channel / three-channel, to meet different experimental requirements
- With advanced gradient temperature control technology, high-performance and long-lasting Peltier refrigeration and heating, which can achieve precise temperature control in zones.
- Multi-channel module design, can run several different PCR gradient programs at the same time, to achieve multi-purpose machine
- Self-adaptive pressure lever hot cap, close and tighten the cap in one step, can be adapted to different heights of test tubes
- Supports up to 199 cycles to perform the next operation, and runs a countdown disc to visually display the remaining time
- Edge temperature compensation technology for good temperature uniformity and gradient settings for easy optimisation of experimental conditions
- Real-time display of the running status of the programme, you can set the security account and password according to customer demand
- Automatic power failure protection, automatically execute unfinished cycles after power restoration to ensure the safe operation of the whole amplification process.
- Hot lid temperature and hot lid operating mode can be set to meet different experimental application requirements
- USB interface, support for U-disk storage/reading PCR data, support for U-disk software update, can be customised to meet the function of multiple file storage, support for Touch down PCR and Long PCR experiments
- Compatible with common 0.2mL PCR tubes, PCR-8Strips and 96-well PCR plates (no skirt, full skirt, half skirt)

Application

TC2000-G1/G2/G3 is an indispensable laboratory instrument in the field of molecular biology, which can be used for gene sequencing, gene cloning, gene expression, mutation, and plays an important role in various fields such as agriculture, food testing, environmental science, drug development and so on.

Medical Research

For pathogen detection, e.g. gene identification of viruses, bacteria and fungi, mutation analysis of disease-associated genes, gene expression analysis in cancer research, etc.

Biological Research

Genotyping, gene cloning, species identification, evolutionary analyses, and other studies

Forensic Science

DNA analysis of crime scene samples to help identify suspects and provide a basis for public security case detection

Agricultural sector

For genetic research on crops and livestock, e.g. breed improvement, genetic disease detection, etc.

Food testing

Detection of pathogenic bacteria, genetically modified ingredients in food, etc.

Environmental Science

Analysing microbial communities in the environment and detecting genetic effects of pollutants on organisms

Drug Development

Screening of drug targets, assessment of drug effects on gene expression

Genetic studies

Conducting diagnosis and research on human genetic diseases

Palaeontology

Analyses species identification and classification, development and evolution, extinction event studies and the origin of species in ancient organisms
