

The Enigma range of steam sterilisers is designed specially for the modern healthcare professional. They are available as a Class "N" non vacuum model and Class "B" fractionated vacuum model in 8, 12, 17 and 22 litre loading capacities.

The simple push button control panel design is very easy to operate. Each programme is fully automated with pre-programmed sterilisation cycles including testing cycles. All Enigma steam sterilisers come with an external micro printer as standard with the option of upgrading to incorporate an inbuilt USB information download facility.

The high precision micro processor control system gives perfect sterilisation results and an inbuilt independent steam generator provides readily available steam for faster sterilisation cycles. The clear LCD screen displays continuous information on each cycle's progress giving relevant updates to the user.

The sterilisation chamber and pressure door are manufactured from the highest quality stainless steel with a highly polished finish and modern design.

All Enigma sterilisers have inbuilt safety features and cycles will not commence until the door is secured. A double locking safety device prevents the door being opened whilst the chamber is pressurised. Safety valves and thermostats prevent over pressurisation and overheating of

both the chamber and steam generator unit. An inbuilt RCD unit also protects all electrical circuits in the event of a malfunction.

All Enigma steam sterilisers fully comply with MDD 93/42/EEC, BS EN13060 small sterilisers, HTM 2010-01-05, pressure equipment directive 97/23/EC "SEP".
