Electrode Features

Titanium Body

The titanium body offers protection from accidental breakage. Rugged and resilient, the titanium works as an electronic shield protecting against interferences from electrical noise or humidity.

Extractable Cloth Junction

The extractable cloth junction allows for clearing any clogging from solids that cause slow response and unstable readings. Pull 3 mm (1/8") to expose a fresh new junction surface for faster response times and reading stability.

Fast, Stable Readings

The double junction design presents a silver-free electrolyte solution interacting with the sample, making the electrode less susceptible to clogging and guaranteeing a fast response and stable reading.

Built-in Temperature Sensor

A built-in temperature sensor inside the sensing tip of the pH electrode allows for rapid determination of the sample temperature as well as temperature compensation.

* Available with Hanna Lab App **Measuring outside the recommended operating temperature range may damage the gel electrolyte and void product warranty.
Note: The tester can display measurements from -2.00 to 16.00 pH. Measurements outside of the pH range will flash.
